Digital Transformation in Government
Introduction

Digital transformation can put governments in a strong position to take quick, decisive action when necessary. Recent disruptive global events have shown that digital technology and data are indispensable tools for governments as they adapt to sudden and unexpected changes across their agencies.

Many government leaders are taking stock and imagining a future with the most attentive, helpful citizen services. They are recognising that a strong digital ecosystem is the foundation for that future. In this time of crisis, governments are accelerating their digital transformation to support employees working from home and to serve citizens seamlessly.

“

We’ve seen two years’ worth of digital transformation in two months. From remote teamwork and learning, to sales and customer service, to critical cloud infrastructure and security – we are working alongside customers every day to help them adapt and stay open for business in a world of remote everything.”

Satya Nadella,
CEO,
Microsoft, on the impact of the COVID-19 pandemic
Digital transformation can help governments seize these opportunities. Governments that successfully navigate their digital transformation journeys understand that the process takes more than just new technology. These organisations focus on their vision and strategy, culture, unique potential and capabilities as foundational success factors – and then look to technology with a specific role in mind.

This eBook explores the components that go into a digital transformation and provides guidance for governments considering a move to the cloud.

Even in ordinary times, governments are presented with many opportunities to provide responsive service to citizens. In a time of global upheaval, new circumstances make the move to digital transformation more urgent.

Some of those scenarios include:

- Increased need and ability to govern remotely
- Delivering citizen benefits remotely and at scale
- Coordinating crisis and first response
- Managing virtual courts and hearings
- Coordinating cross-agency collaboration
- Developing remote learning
- Monitoring virus outbreaks
- Providing virtual visits
- Accelerating research and development
- Outreach and support for citizens
- Responding to employment and skilling needs
- Fraud prevention
Contents

1 Leading through crisis
2 Governing remotely
3 Building citizen trust
4 A cloud fit for government
5 Intelligent security where it matters most
6 Reducing the burden of compliance
7 Technology for all
8 Upskilling for today – and tomorrow
9 Removing your carbon footprint
In a time of crisis, citizens look for leadership first from their government. For the most part, people trust their government to have their best interests at heart and to take action to protect them and their livelihood. Governments must continue to deliver critical citizen services securely while they simultaneously respond to the crisis at hand. Continuity of operations is a key part of maintaining calm and confidence across a population. Having robust and responsive technology in place to handle unusual circumstances can position governments to respond quickly and efficiently.

Modernise before a crisis

Modernising services with cloud-based digital technology during non-crisis times can make government and agencies better prepared to step up during a crisis. The agility of cloud services allows governments to scale and adapt services based on growth, connecting any device from anywhere and without adding additional hardware.
Some services to consider modernising with cloud technology include:

**Remote governance**
Cloud-based products and services facilitate secure collaboration and remote working for all, with built-in accessibility features.

**Public health**
Using data to help public health authorities make informed and effective decisions.

**First response**
Connecting first responders via technology, which can allow chat, call, video and photo sharing.

**Delivering citizen services remotely**
Updated apps, bots and data collection infrastructure make it easier to provide personal services, track those services and respond when something goes wrong.

### Technology in action during a crisis

As recent global events unfolded, we identified some organisations demonstrating strong leadership using technology during the crisis:

- The City of Kumamoto, Japan is using Microsoft Teams for COVID-19-related taskforce meetings and to gather and distribute updates on their response between crisis management and disaster prevention offices.

- **International healthcare organisations** overwhelmed with patient inquiries have created and deployed 1,230 COVID-19 self-assessment bots, reaching 18 million individuals.

- In Wenzhou, China, healthcare professionals at the Second Affiliated Hospital of WMU – the largest hospital in the area – are using Microsoft Teams video meetings and calling across mobile devices to communicate with clinicians who are working inside of quarantined sections of the hospitals.

- London Metropolitan Police in the United Kingdom are ensuring continuity of operations through coordination, communications and collaboration with Microsoft Teams.
Digital Transformation in Government

Now governments must consider how to perform necessary functions remotely:

- Enable easier access to secure government services on demand, when and where they are needed.
- Personalise government services to meet the needs of all citizens, with accessibility and security built in.
- Service citizens at scale via highly secure and compliant intelligent tools.
- Deliver government programmes with faster response time and quicker issue resolution from the field through cloud data analytics and AI.

Secure and reliable tools can help

Maintaining the primary functions of government requires secure and reliable tools to break down barriers, share information and work optimally where policies and needs intersect. This is how governments can create and manage initiatives more effectively.
Governments need to ensure continuity of operations for their parliaments, cabinets and councils so decisions can be made collaboratively and securely, while enabling citizens to watch and participate remotely. A holistic technology solution for remote governance requires consideration of three key areas:

1. Communication and collaboration
How will employees connect securely? Is videoconferencing feasible? What about working in productivity software like Word, PowerPoint or Excel? Can employees share, comment and co-author effectively?

2. Data collection, storage and analysis
Trustworthy, consistent data collection can help governments address situations as soon as they need attention and can help with decision making. The right kind of data storage makes it available to all the agencies that need access, facilitating quicker response when necessary.

3. Reliable, secure devices
Security and compliance in government requires special consideration when deploying devices to employees. Microsoft Surface devices include robust compliance certifications and warranties, and Microsoft Surface Enterprise Management Mode (SEMM) allows IT administrators to secure and manage firmware settings. SEMM also uses a certificate to protect the configuration from unauthorised tampering or removal. When issuing devices, governments also need robust endpoint security and management such as Microsoft Enterprise Mobility + Security to help protect data and infrastructure.

**Training is critical for success**

To ensure continuity of government operations, leaders must train employees for remote working while also providing them with the tools they need to get their jobs done.

We designed Microsoft Teams so that government and first responders could use it securely and in compliance with important regulations. Teams is FedRAMP compliant and helps healthcare organisations to enable HIPAA compliance, as well as GDPR, EU Model Clauses, IRAP and other government regulations. Teams allows employees to exchange sensitive information across internal and external stakeholders and across agencies.

Sharing real-time information on a platform where collaborators can connect – including remote employees or people outside of the organisation or agency – is critical when coordinating essential work, patient care or public service delivery to citizens.
Governments and their agencies hold a specific responsibility to build and maintain trust with the citizens they serve. This trust is developed over time as leaders show up for their people in ordinary and not-so-ordinary times, keeping the safety and interests of their citizens at the front of decision-making.

The way governments conduct business on behalf of their citizens, and who governments choose to engage with, can impact this relationship.

### Pillars of trust

There are four pillars of trust that can help guide government agencies as they work through digital transformation:

1. **Security: keeping people and data safe in a dangerous world.**
   Enabling modern security also requires new ways of thinking and operating. Microsoft uses an approach called [Zero Trust](#) to protect data and identities.

2. **Privacy: a fundamental human right.**
   Just as with security, privacy needs to be built into technology from the ground up. Microsoft builds privacy into its services as part of the Microsoft Security Development Lifecycle.

3. **Compliance: an opportunity, not a burden.**
   Meeting and exceeding compliance standards is an investment in trust. Microsoft works closely with governing and industry bodies to help shape and update standards.

4. **Transparency: partnering to build trust.**
   In a world where data has massive value, trust is built over years and destroyed in a moment. Transparency helps trust grow, and Microsoft empowers customers to easily understand and manage things like data access.
Microsoft has been a trusted technology provider for more than four decades, and we take our responsibilities as a technology leader and innovator seriously. We also understand the value of partnership, learning from one another, being transparent and most importantly, backing up our words with our actions.

Visit the Microsoft Trust Centre for the latest information, news and best practices.

“If we can’t protect people, then we don’t deserve their trust.”

Brad Smith,
President and Chief Legal Officer,
Microsoft
Citizens are looking to their government agencies to provide the same level of service and innovation that they see in their day-to-day business and private lives. The place to do that is in the cloud.

Microsoft offers various configurations of cloud services to meet the needs of most every government organisation, including hybrid environments, enabling you to modernise your legacy infrastructure in a flexible way that works best for your organisation. We have a comprehensive set of compliance offerings, with 90 compliance certifications to help government organisations comply with national, regional and industry-specific requirements. Regulations and standards include:

- International Organisation for Standardization (ISO) 27001, 27018, as well as 22701, which emphasises cloud-specific threats and risks
- Federal Risk and Authorization Management Program (FedRAMP)
- HITRUST Common Security Framework (CSF)
- European Union Model Clauses
- General Data Protection Regulation (GDPR)

Governments are increasingly moving workloads to the cloud to reduce IT costs as budgets are cut due to revenue shortfalls. The cloud can improve agility and help government achieve scalability when immediate expansion of services is required, such as delivering an increased number of unemployment benefits during a crisis.
Customer stories

Canada Mortgage and Housing Corporation (CMHC) streamlined processes across the organisation from finance to procurement and mortgage-backed securities by adopting Azure as its common cloud platform. This improved its security posture and advanced analytics capabilities, all of which enhance service to Canadians and their housing needs.

In Thailand, the government’s Ministry of Public Health is using digital transformation to contribute to the social good and extend government services. Using Microsoft technologies such as machine learning and computer visualisation, the ministry is more efficiently identifying public health risks and disease hotspots to reduce the risk of epidemics. Advances like these are only possible in the cloud, but getting there doesn’t have to be difficult.

First steps

Pick a simple, yet visible workload to move to the cloud first. This will help you identify skills gaps and understand the business processes that need to evolve, the partners you need to work with and the challenges you need to overcome.

A successful move to the cloud requires collaboration across IT, HR, finance, security and compliance and lines of business – as well as external suppliers and delivery experts. Bring stakeholders in early and make the move together.

Set expectations that this is a process not a destination. Moving to the cloud is a continual journey of evolution. There will always be new technology that will benefit your citizens or organisation that you should consider.

The sooner government organisations begin moving workloads to the cloud, the sooner they can better serve their citizens, achieve economies of scale and modernise their operations. Learn more about cloud computing.
Shifting to remote government work can potentially increase vulnerability to data breaches and attacks if systems and processes are not secure from the ground up.

In a time of global emergency, fraudsters are likely to try to take advantage of emergency aid funding, compromising governments’ ability to help those who need it most.

Today, more and more organisations are shifting toward a new security model that enables a mobile workforce, and protects devices, apps and data wherever they’re located. An end-to-end Zero Trust approach aims to build security into the entire digital estate, across your identities (usernames and passwords), devices, network, infrastructure, applications and data. With Microsoft solutions, governments can take immediate steps toward a Zero Trust security model.

Microsoft’s integrated approach to security delivers a frictionless experience for end-users, ensuring everyone can get their job done securely regardless of where they work and which tools they use. AI and automated capabilities free security teams from repetitive tasks and empower them to focus on more strategic initiatives.

5 Intelligent security where it matters most

The number of cyberattacks on government agencies is increasing. According to Verizon’s 2019 Data Breach Investigations Report,¹ the public sector has the highest number of incidents compared to other sectors. Government agencies have, arguably, the most to lose from an attack. A data breach can erode confidence in government institutions and public trust, and hamper first responders in delivering critical, life-saving services.

¹ Verizon’s 2019 Data Breach Investigations Report
Customer story

The city of Oulu is one of the most technologically advanced population centres in Finland. To maintain this reputation and give employees the ability to securely work and collaborate from anywhere, the city adopted Microsoft 365.

Though Oulu’s infrastructure was primarily on-premises, the education services department had migrated to Microsoft Office 365 in 2010. The city was therefore familiar with the core security and collaboration benefits a cloud-based Microsoft solution had to offer.

Microsoft 365 – the leader in cloud-based productivity and security – had an immediate effect on Oulu. Many employees discovered the productivity and collaboration benefits for the first time. Others began to experience the freedom to work anywhere, anytime.

To ensure users and data remain protected, the city implemented a layered security approach. Microsoft solutions enable city employees to access all their apps and documents remotely through Azure Multi-Factor Authentication. To bolster this security stance and further reduce the risk of a data breach, Oulu is also using Microsoft solutions and services for enhanced email, app and data security. As a result, the number of phishing attacks on the city has dropped by 30%.

Microsoft can help transform your security, too. To learn more, visit Microsoft Security and explore our solutions. You can also read more about Zero Trust and how a Zero Trust model can help governments protect data.
Meeting compliance obligations in a dynamic regulatory environment is a complex undertaking. It can’t be accomplished alone. Moving to the Microsoft cloud helps reduce the burden. Microsoft helps governments navigate this ever-changing landscape so they can focus on meeting their missions.

Through our integrated technology, intelligence and partnerships, Microsoft helps governments achieve compliance and further deliver on organisational goals. Microsoft offers a suite of products created to help organisations meet compliance obligations and we are transparent in how we help them remain compliant.

Reducing the burden of compliance

New and revised laws, regulations, policies and procedures are introduced every year. At the same time, as government agencies undergo digital transformation, the volume of data they generate grows exponentially, requiring more oversight and compliance. When governments are caught in a period of global disruption or crisis, compliance becomes a particular challenge as it can slow down the ability to serve the public quickly and effectively.
Customer story

With employees accessing and sharing data both at home and on site, the Swedish municipality Söderhamn Kommun needed a solution that would support a flexible work style while complying with the European Union’s General Data Protection Regulation (GDPR). The municipality moved to Microsoft 365 as a first step in its cloud journey.

As Söderhamn rolls out Microsoft 365 across the organisation, the team plans to take more control over its data and devices so they can scan attachments and URLs in emails, as well as implement phishing protection. In addition, they are now able to classify and encrypt their documents – a key requirement under GDPR.

With this digital transformation, Söderhamn can circumvent the need to extract data from secure locations, enabling it to use data more safely and efficiently. In addition, Söderhamn is implementing functions for secure messaging across key areas of the organisation and creating secure storage areas to provide better protection for data used in collaboration between teams and individuals.

Download our white paper to learn how to manage compliance in the cloud, visit our Trust Centre, peruse a full list of compliance resources to help you meet worldwide and region-specific standards, or explore compliance solutions that help you intelligently assess your compliance risks, govern and protect sensitive data and effectively respond to regulatory requirements.
It’s important to remember that digital transformation is not simply about technology. It requires organisations to re-envision existing business models and embrace a new way of bringing together people, data, and processes to create value for everyone. A global shift to remote working opens the door for more accessibility as employees enable closed captioning for video calls and are able to connect more easily and frequently. Not all remote working software is created equal, and it’s important to ensure accessibility for all.

There are a billion people in the world who have disabilities, many of whom need assistive technology. But only one in 10 have access to the products they need.\(^2\) Disability – whether temporary, situational or permanent – can affect anyone at any time. Accessibility is imperative.

The challenge – and goal – is to foster a transformation that lives up to its promise of being accessible and inclusive for all. When you have accessible tools and technology that everyone can access in an organisation, and in interactions with constituents and partners, you can amplify innovation and productivity.

We provide Accessibility Conformance Reports that demonstrate how our products and services meet international accessibility standards, including: ETSI EN 301 549, US Section 508 and WCAG (ISO/IEC 40500).

Accessibility has far-reaching benefits to both your organisation and to the citizens you serve. To learn more about the impact of accessibility on your organisation, download the eBook, 3 Ways an Accessibility Strategy Can Help Boost Business Performance, or read How Accessibility Can Empower Your Company and Culture. If you’re interested in how accessibility can impact your citizens, read the eBook The Accessibility Advantage: Driving an Inclusive Customer Experience.

**Customer story**

Like Microsoft, Moovit is passionate about creating products that help people with disabilities unlock their full potential. Launched seven years ago in Israel, Moovit has become the world’s most popular transit-planning and navigation app. The company is also a leader in inclusive technology, with innovative work that makes it easier for people with a variety of disabilities to use buses, trains, subways, ride-hailing services and other modes of public transit.

Moovit has developed a variety of products, such as screen readers and global data on wheelchair-friendly routes. Moovit’s live audio navigation helps people with an intellectual disability who want extra guidance with alerts for when a bus is coming, when to transfer and when to get off.

Moovit has partnered with Microsoft to provide its multi-modal transit data to developers who use Azure Maps, and a set of Mobility-as-a-Service solutions to cities, governments and organisations. Developers who use Azure Maps will have access to Moovit’s trip planner and rich data to help build innovative, accessible tools. Thus, the partnership between Microsoft and Moovit will foster the creation of more inclusive, smart cities and more accessible transit apps. Moovit is just one example of how organisations are democratising technology. There are plenty more opportunities to improve accessibility and inclusivity.

Digital transformation is driving change throughout government – down to the skills that employees need to be productive. According to the World Economic Forum’s 2018 Future of Jobs Report, there will be “an average shift of 42% in required workforce skills over the 2018-2022 period.”³

However, upskilling isn’t a challenge for the future. It’s an issue governments grapple with today. “Macro trends such as digital transformation and the decreasing shelf life of skills are leaving organisations to play catch-up as they try to hire and develop the right skills,” according to LinkedIn Learning’s 2019 Workplace Learning Report.⁴

For government organisations, upskilling presents a dual challenge: in addition to upskilling their own employees, governments are also concerned with ensuring citizens have the proper technology skills to remain competitive in the job market. These are complementary issues. As leaders, governments must set the example, using digital technologies to serve citizens. To do so, governments need citizens who have the skills to drive technological advancements in government and other industries.

Microsoft helps government organisations address these exact challenges. Our skills offerings focus on both technical and non-technical learners within government and are primarily targeted at upskilling employees who need to acquire additional skills to do their current job or a new one. Microsoft also offers a variety of resources to help business decision-makers and other non-technical government employees become more familiar with technology trends and concepts.

Customer stories

Governments around the world are using Microsoft skills development solutions to upskill their employees as well as their citizens. In Colombia, half a million students, teachers and employees now have unlimited access to online learning courses that will help them build vital technical and soft skills through a new agreement between SENA (Colombian National Learning Service) and LinkedIn Learning. Together, SENA, Microsoft and LinkedIn are helping prepare Colombian workers to thrive in the digital economy and create new pathways to opportunity for the nation’s workforce.

In 2018, the municipality of Dubai rolled out LinkedIn Learning to its employees. The platform was well received. 94% of employees activated their licences and the average user watched more than 10 hours of courses in the first 14 months.

Find out what LinkedIn Learning resources are available for your organisation.
Over the past 50 years, the average temperature on the planet has risen by 1°C Celsius. Scientific research clearly points to carbon dioxide emissions as the primary driver. If we don’t reduce carbon emissions, scientists estimate that by the end of the century average temperatures will rise another one to four degrees, with catastrophic consequences.

For more than two centuries, economic development has generated an ever-increasing amount of carbon emissions. Creating more economic opportunity and prosperity will likely require even more energy use. Going forward, we need to use more energy while reducing carbon emissions. Governments and large enterprises are ready to lead the way, and we are here to help.

At Microsoft, we have an ambitious goal to reduce – and ultimately remove – our carbon footprint. By 2030, Microsoft will be carbon negative and by 2050 Microsoft will have removed from the environment all the carbon the company has emitted, either directly or by electrical consumption, since it was founded in 1975.

Progress requires not just bold goals like these, but a detailed plan. We have an aggressive programme to cut our carbon emissions by more than half by 2030, both for our direct emissions and for our entire supply and value chain. The programme is funded in part by expanding our internal carbon fee, in place since 2012, to start accounting not only for our direct emissions, but also those from our supply and value chains.
Government agencies like JTC are realising the value of achieving sustainability through energy-smart facilities. Since 1968, JTC has played a critical role in developing Singapore’s industrial landscape. Inspired by Microsoft’s Redmond campus, JTC decided to become more sustainable by using data sensors and predictive analytics to reduce energy use in its buildings and increase productivity. The agency is using integrated solutions to gain improved building management insights that can, for example, result in adjustments to air conditioning systems for more efficient air flow and reduced cooling costs. Like JTC, you may find that small changes can have a big impact on your costs and carbon footprint.

Try it

Use the Microsoft Sustainability Calculator to gain insights into the carbon emissions of your IT infrastructure and make more sustainable decisions.

Governments around the world are making sustainability a priority, and so is Microsoft. Learn more about how we plan to reduce our carbon footprint to become carbon negative by 2030 and our approach to product sustainability.
Conclusion

A worldwide crisis is prompting many governments to assess the state of their digital proficiency. This is accelerating a move toward more holistic digital transformation throughout the industry. Microsoft understands the unique needs of your organisations as you undergo digital transformation. Through our deep commitments to trust, innovation, security and compliance, we've helped governments around the world enable remote access, empower cross-agency collaboration and deliver trusted and secure services.
