- Gain early visibility of updates & plan weeks ahead
- Access a clear solution roadmap

What you get

We will review your update release process and make some recommendations for change.

Plan for Microsoft One Version updates weeks ahead of schedule with **HSO Foundation Services**

We know that being on the most up-to-date version of Microsoft Dynamics 365 provides your business with a competitive advantage, due to the innovations it delivers for ever-changing customer demands. However, the fast-paced cadence release service does pose a challenge. Managing the risk, due to the limited time between general availability of an update and its delivery into production, means testing time is at a premium and can be a huge drain on an organisation's resources.

Why you need HSO Foundation Services?

HSO Foundation Services is built upon Microsoft best practice. It is a robust and proven framework, that enables our customers to deliver agility and innovation into their business, which translates into value for their customers.

It helps to drive down the ongoing total cost of maintaining the Microsoft Cadence program through HSO's economy of scale.
